Market Study

Product Expiry Tracker

This study evaluates the market need for Product Expiry Tracker, a simple bilingual application that helps users track expiry dates for food, medicine, makeup, skincare, supplements, and household products. The app is designed to send reminders before products expire.

1. Introduction

People often forget product expiry dates, especially when managing many products at home. In the survey, 66.7% of participants said they forget expiry dates very often, 83.3% had found an expired product, and 66.7% currently check packaging when needed. The main target users are university students, families, makeup and skincare users, medication or supplement users, and people managing household products. Arabic and English support is intended for users in Saudi Arabia and other Arabic-speaking markets.

2. Competitor Analysis

Competitor	Services	Offers/Features	Customer Satisfaction
NoWaste	Tracksfood expiration dates	Expiry reminders, food inventory, notifications	Users appreciate its reminders and organization
Best Before	Tracks expiration dates for different products	Notifications, product lists, barcode scanning	Users like its simple and easy-to-use design
Google Calendar		Users can manually add expiry-date reminders	Highly familiar and easy to use, but it requires manual entry

Competitor	Services	Offers/Features	Customer Satisfaction
	General reminders and scheduling		
Our Product Expiry Tracker	Tracks food, medicine, makeup, skincare, hair products, and household items	Expiry reminders, organized categories, and one place to track products	Designed to be simple, convenient, and useful for different types of products

Competitive advantage: Our product focuses on **multiple product categories in one app**, rather than mainly focusing on food or requiring users to manually create individual reminders.

2.1 Existing Solutions.

- **Expiry tracking apps:** Some apps allow users to record products and receive reminders before they expire.
- **Calendar and reminder apps:** Apps such as Google Calendar and Apple Reminders can be used to manually set expiry-date reminders.
- **Writing dates down:** People may write expiry dates on paper, notes, or labels to remember them.
- **Checking products manually:** Some people simply check their products regularly for expiration dates.

Problem with existing solutions: Most of these methods require **manual input and regular checking**, and they may not provide one simple system for tracking different types of products such as food, medicine, makeup, skincare, and household items.

3. Feature Comparison

Feature	NoWaste	Best before	Google Calendar	Apple Reminders	Our Project
Expiry tracking	✓	✓	✓	✓	✓
Notifications	✓	✓	✓	✓	✓
Food products	✓	✓	✓	✓	✓
Medicine	✗	**Limited**	✓	✓	✓
Makeup & skincare	✗	**Limited**	✓	✓	✓

Household products	✗	**Limited**	✓	✓	✓

4. Customer Feedback Analysis

- **66.7%** of respondents said they forget product expiry dates **very often**, while **33.3%** said **sometimes**.
- **83.3%** of respondents had found an **expired product**.
- The most commonly tracked products were **makeup (66.7%)** and **medicine (66.7%)**, followed by **hair products (50%)**and **food (50%)**.
- **66.7%** of respondents check the product packaging to track expiry dates, while **33.3%** do not track them at all.

4.1 Positive Feedback

5. Most respondents experience problems remembering expiry dates.
6. The survey shows a clear need for an easier expiry-tracking solution.
7. Users track different types of products, showing that the app could be useful beyond just food.
8. The high percentage of respondents who found expired products supports the usefulness of expiry reminders.

4.2 Negative Feedback & Market Gaps

- **66.7%** of respondents said they forget expiry dates very often.
- **83.3%** had found an expired product.
- **33.3%** of respondents do not currently track expiry dates.
- **66.7%** rely on checking the product packaging, which can be easy to forget or overlook.
- Respondents have difficulty keeping track of expiry dates across different types of products.

5 Market Opportunity & Differentiation

Based on the analysis, our project has strong potential in the market. It differentiates itself by:

- **Tracking different types of products** such as food, medicine, makeup, skincare, hair products, and household items in one place.
- **Providing expiry reminders** to help users remember important dates.
- **Offering an easy and organized solution** instead of relying on paper notes or manually checking products.
- **Helping reduce waste** by reminding users before products expire.
- **Addressing a real customer need**, as many survey respondents reported forgetting expiry dates and finding expired products.

6 Conclusion

The market study confirms a strong demand for **a simple and convenient product expiry tracking solution that helps users organize their products and receive reminders before they expire**. The survey results and competitor analysis show an opportunity for our project to provide a more complete solution for tracking different types of household products.
